Thanks Steve.

That's what I figured and why I send the alert-or asked joe to. It's just a lot of rain. Natural conditions, but you know how things are. I'd rather we take the initiative and push it out rather than being questioned.

Thanks for the on scene update. That's as I expected, but now, if questioned I can say we've been I direct coordination, etc, etc. and I have better info.

Cheers
Mike

Mike – it rained most of the day onsite, it was raining at 7 PM onsite, and it has been raining heavily since 9 PM in Silverton for about 2 hours. It's very turbid in every drainage that I observed coming out tonight.

Yes we can talk about that. It's consistent with the spirit of the notification plan.

Thank you

FYI for situational awareness only.

I think we should also consider some pre-emptive notifications on those days in which activities at the mine may impact turbidity. Steve mentioned a couple of upcoming operational activities that may increase turbidity and if we know a day or so ahead of time these activities are taking place we could/should send out a Notification Only

Alert as a heads-up. I don't know which specific activities Steve was referencing but Mike or I can reach out to Steve if (a) this seems like a good idea and (b) Dave O doesn't already have this info.

Subject: Notification Only Alert – Possible Turbidity in Animas River due to recent
 severe weather.

Notification Only Alert – Possible Turbidity in Animas River due to recent severe
 weather.

A significant rain event over the past 24 hours (and continuing into this evening)
 throughout the Animas River valley, may result in additional visible turbidity within
 the Animas River and adjacent tributary streams. Please note that visible turbidity in
 the river may fluctuate in relation to regular occurring weather events, and is not

associated with operations at the Gold King Mine Site.

Additional relative Animas River information as follows:
